Yesterday Russ Banush got a fatal error while attempting to compile CFEIS data into LOD/Star table format after choosing to confirmatory test a diesel Mercedes vehicle (Test Group = 9MBXT03.0U2B, Vehicle ID / Vehicle Configuration X164DE30-Z9000 / 0). See below for the exact error. It appears that the problem occurs because Verify is incorrectly requiring an evaporative family when it shouldn't for diesel-fueled vehicles.

Russ is anxious to get this data over to LOD so Ben can schedule the test. We need to know the quickest way to make this happen.

Thanks,

Karen

FYI:

I have requested the FTP. HFET and US 06 testing of the Mercedes MBX/ GL 320 BLUETEC (SCR Technology) scheduled for availability at our lab 13 March.

This vehicle meets T2 Bin 5/ LEV-II ULEV standards.

VERIFY gave this error message:

"There was an error connecting to LOD. The Verify administrators have been notified. They will correct the error and complete the data transfer to LOD. STAR Transfer Error Message: Cannot find evaporative system data in CFEIS."

Deliberative Process / Ex. 5

This is a diesel so there is no evaporative emissions.

Regards,

Russ Banush
